

Screening | Crushing | Blending | Magnet treatment | Compacting

# Added value activities

Besides performing various types of transshipment and storage activities, OVET also offers longstanding experience in the processing of dry bulk cargo:

- › Screening;
- › Crushing;
- › Blending;
- › De-ironing

For more than 40 years, OVET has been extending its screening facilities at its terminals. Besides the typical sizes, such as 0/6, 6/12, 12/22, 22/30, 30/60 and 60/+mm, OVET has the capacity to screen various types of in-between sizes upon request. At its terminal in Terneuzen, 6 sizes can be screened with the use of a

fixed screening installation. At its terminal in Vlissingen, two mobile screening installations can be combined to screen 5 different sizes. In addition, OVET is equipped to perform crushing operations on any oversize material.

Upon request, OVET can produce various types of blends in different proportions and can perform de-ironing operations on cargo, polluted with iron parts.

Besides screening and crushing of dry bulk, OVET also boasts extensive experience in blending different cargoes, magnetic processes and compacting self-heating stockpiles.

# Lightering operations

## Lightering operations on the river Scheldt

Lightering capacity: 18.000 tonnes in one tide.

Lightering vessels destined for final ports:

- > Terneuzen
- > Ghent
- > Antwerp
