

Breakbulk

Ovet handles a wide variety of breakbulk cargoes: From bagged agricultural products to unpacked wind turbine equipment and everything in between: Ovet can handle it all! With a major focus on various types of steel, our professional and experienced staff will handle your cargo with care.

We can assist with lashing, securing & dunnage. In this way, the cargo will leave our terminal as it arrived, i.e. in perfect condition.

Offshore, decommissioning and circular residues

New energy

As it makes perfect common sense to use alternative energy products, OVET holds an extended license to store, handle and tranship various types of circular waste, such as scrap, plastics (RDF), contaminated soil, etc.

As far as the offshore industry is concerned, OVET handles a tremendous amount of high-density aggregate used to build the wind farms out at sea. Furthermore, OVET is licensed to receive and decommission products generated by offshore projects.

OVET may therefore also produce a number of waste streams, which must be monitored for compliance and traceability purposes.
